

Don't let your network get hijacked!

- Monitor internal user activities and receive instant Email alerts on any security policy violations.
- Automatically generate compliance reports for GLBA, HIPAA, PCI, and SOX Acts.
- Stop sifting through voluminous logs and take time and cost advantage of EventLog Analyzer's centralized automatic log collection feature.

Internal Threat to Enterprise IT Networks

Typically organizations plan their network security around the principle that external networks present the most risk to an organization's critical infrastructure. Overlooking an acute flaw in this belief: Internal security poses as a significant threat if not monitored and encountered. Increasing user mobility and number of devices accessing a network are a few reasons that have left Enterprise Networks more vulnerable to rising malicious attacks. Enterprises also need to monitor and control the network activities of internal users in a non-intrusive and non-embarrassing manner. This is where a solution like EventLog Analyzer comes into work.

Regulatory Compliance Report

Enterprises are faced with the need to comply with government and industry regulations, as well as internal security measures and data privacy demands. EventLog Analyzer comprehensively supervises the implementation of various compliance needs by ensuring it monitors the network for any deviation from the set standards thereby increasing efficiencies and reducing cost. EventLog Analyzer helps your Network/System Administrator comply with pre-defined regulatory standards such as the Gramm-Leach-Bliley Act (GLBA), Health Insurance Portability And Accountability Act (HIPAA), Payment Card Industry Data Security Standard (PCI - DSS) and Sarbanes-Oxley (SOX) Act.

Introducing EventLog Analyzer

EventLog Analyzer is a web based, real time, agent less, event log and application log monitoring and management software. EventLog Analyzer collects, analyzes, reports and archives logs. Security policies must be in place to prevent intrusion into internal resources and protect private information. EventLog Analyzer helps identify any user who accesses data without verification and empowers the Administrator to ensure only those with the right privileges are accessing the data and systems.

The EventLog Analyzer application generates graphs and reports that help in analyzing system problems with minimal impact on network performance. EventLog Analyzer helps organizations meet host-based Security Information Event Management (SIEM) objectives.

“EventLog Analyzer has made the job of reviewing logs much easier. We save many hours every week.”

Secure Your Network Resources

- Security Policy violations can be detected and alerts generated.
- Identify unauthorized/failed login(s) and malicious activities.
- Spot the VPN Users in real-time.

Be Compliance Audit Ready

- Pre-built compliance reports for SOX, HIPAA, PCI, GLBA regulatory acts.
- Customize reports to suit your requirements.
- Create reports for any new compliance acts.

Get Instant Alerts About Network activities

- Receive automatic real-time alerts for customized alert profiles.
- Set specific criteria on hosts/group of hosts which need monitoring.
- Setup Email notification of alerts or run a program for any other means of notification.

System Requirements

Pentium IV 1.8 GHz, 512 MB RAM on Windows 2000, XP, 2003 & Vista and Linux all flavors. Browsers: IE & Firefox

Go Back in Time and Analyze for the Future

- Reports that help augmenting resources and in capacity planning.
- View and generate trend reports to show event patterns across hosts for various event types and event severity parameters.
- Trends on alerts triggered are also available.

Any Device, Any OS - Monitor Them All

- Windows NT/2000/2003/XP/Vista/2008.
- Linux - RedHat, Debian.
- UNIX - Solaris, HP-UX.
- Switches and Routers - Cisco and others.
- SNARE for Windows.
- IIS - Web server, FTP server and MS SQL server.
